Ironlauncher

miguel.garrido@ironhack.com

IRON
HACK

Ironlauncher

Ironlauncher dynamically **generates** a project structure based on different choices:

1. View

2. JSON

3. Fullstack

Ironlauncher

Has a preferred directory structure:

- `public` : Public Assets folder (css, js scripts, images)

- `models` : Mongoose Schemas and models

- `routes` : Project routes

IRON
HACK

Ironlauncher

Uses:

- `nodemon`, `mongoose`, `morgan`, `cookie-parser` and other useful packages are pre-installed.

- Error handling support included

- .env file added

Ironlauncher

Installation

```
npm install -g ironlauncher
```

IRON
HACK

Ironlauncher

Usage

```
npx ironlauncher@latest name-of-project
```
